DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

George Herbert Jones Chemical Laboratory is located on the northwest side of the main quadrangle of the University of Chicago campus. It is a 1929 structure, and as seen on the enclosed campus map, it is connected to Kent Hall on the east and Searle Hall on the north.

Room 405 is a small, approximately six by nine foot, pantry-like room, with shelves and counters along each wall. The room, which can be viewed through a glass door, is set up with laboratory equipment and looks virtually the same as it does in ca. 1942 photographs taken shortly after the historic experiments were completed there.

Room 405, which is located on the fourth floor, was undamaged by a 1973 explosion which destroyed the basement and first floor of the building.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

In Room 405 of the George Herbert Jones Laboratory at the University of Chicago, a group of chemists working under the direction of Dr. Glenn T. Seaborg first isolated a pure compound of the man-made element plutonium. The sample, isolated on August 18, 1942, was the first synthetically produced isotope of any element seen by man. Less than a month later, on September 10, 1942, B. B. Cunningham and L. B. Werner prepared the first weighable sample of a synthetic element. This first isolation and weighing of plutonium was a milestone in the development of nuclear energy. The extraordinary importance of plutonium as a basic fuel for nuclear power reactors has opened for the benefit of mankind a whole new realm of science and technology.
